

Contrast

Small text must be a minimum 4.5:1 contrast ratio and large text must be a minimum of 3:1. White text over an images or gradient, is tested with Adobe's internal tooling.

Learning Objectives – Color contrast

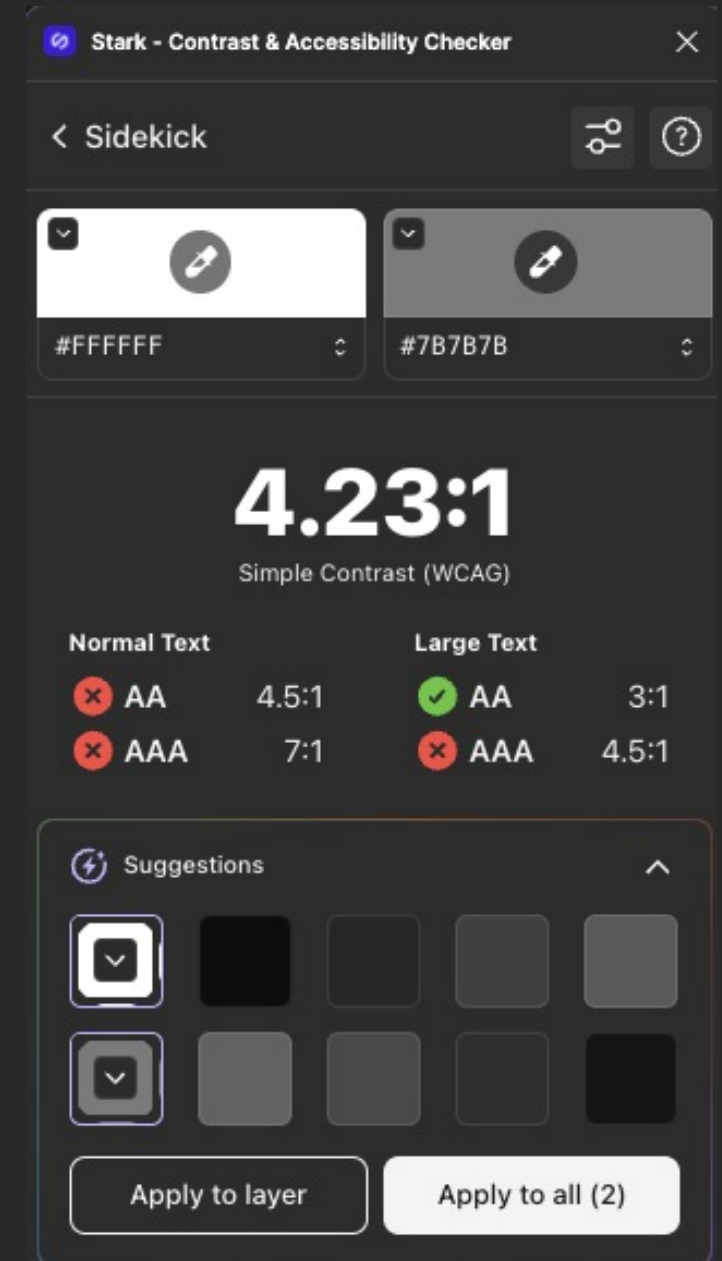

By the end of this lesson, content authors will be able to:

1. Understand the user impacts of color contrast.
2. Ensure small text is 4.5:1 to its background.
3. Ensure large text and important graphics are 3:1 to their backgrounds.
4. Ensure white text over gradients or images meets contrast minimums.
5. Understand your role in creating accessible user experiences for disabled users of a.com regarding color contrast.

Introduction to color contrast

How does color contrast work?

- If text is small, it's already harder to see, therefore it needs a higher contrast to be readable.
- If text is large, it has more graphic matter to perceive, therefore it can stand to have less contrast.

Color contrast in action

Example:

- The same color is used four ways below, the small/regular text fails as it's 4.23:1 and not 4.5:1.
- The 4.23:1 exceeds requirements for large text though.

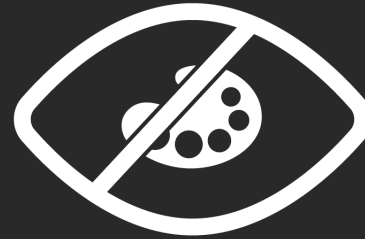

- ✗ #7B7B7B -- small text 19 pixels non-bold
- ✓ #7B7B7B -- **large text 19 pixels non-bold**
- ✗ #7B7B7B -- Small text 23 pixels
- ✓ #7B7B7B -- Large text 25 pixels

Color contrast – User impacts

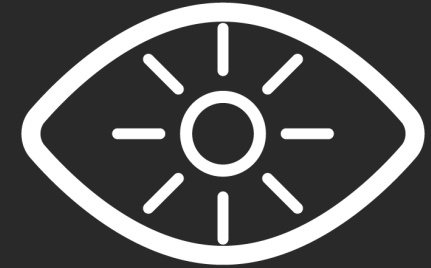

Limited vision

- People with lower visual acuity often benefit from a stronger contrast of text and graphical elements.

Color vision deficiency

- People with color vision deficiency (aka colorblindness) benefit when we do not rely on color alone like link text in a paragraph or lines on a line chart.

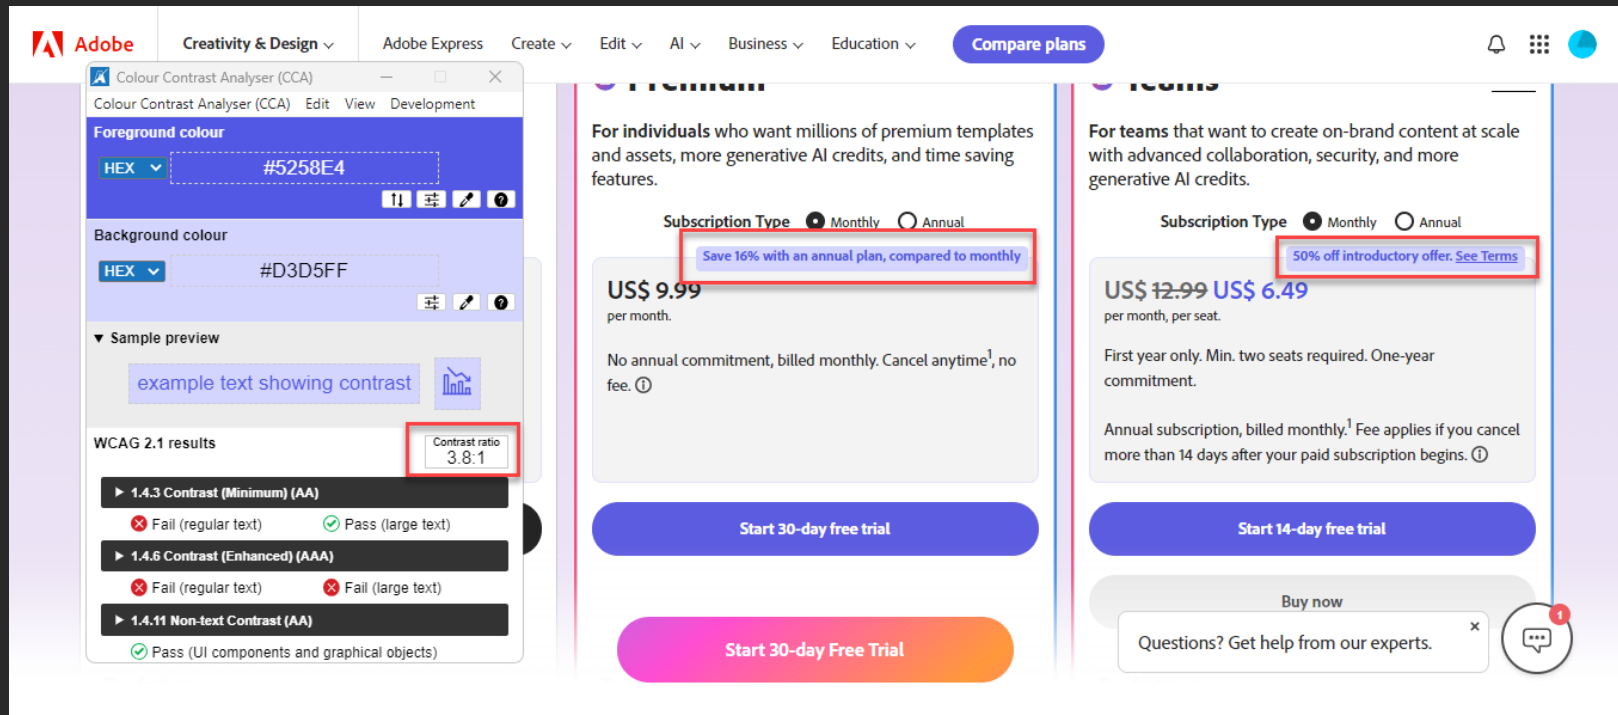

Contrast sensitivity

- Some folks set their device or browser to a variety of color settings to deal with too low, or even too high, contrast levels.

Small text

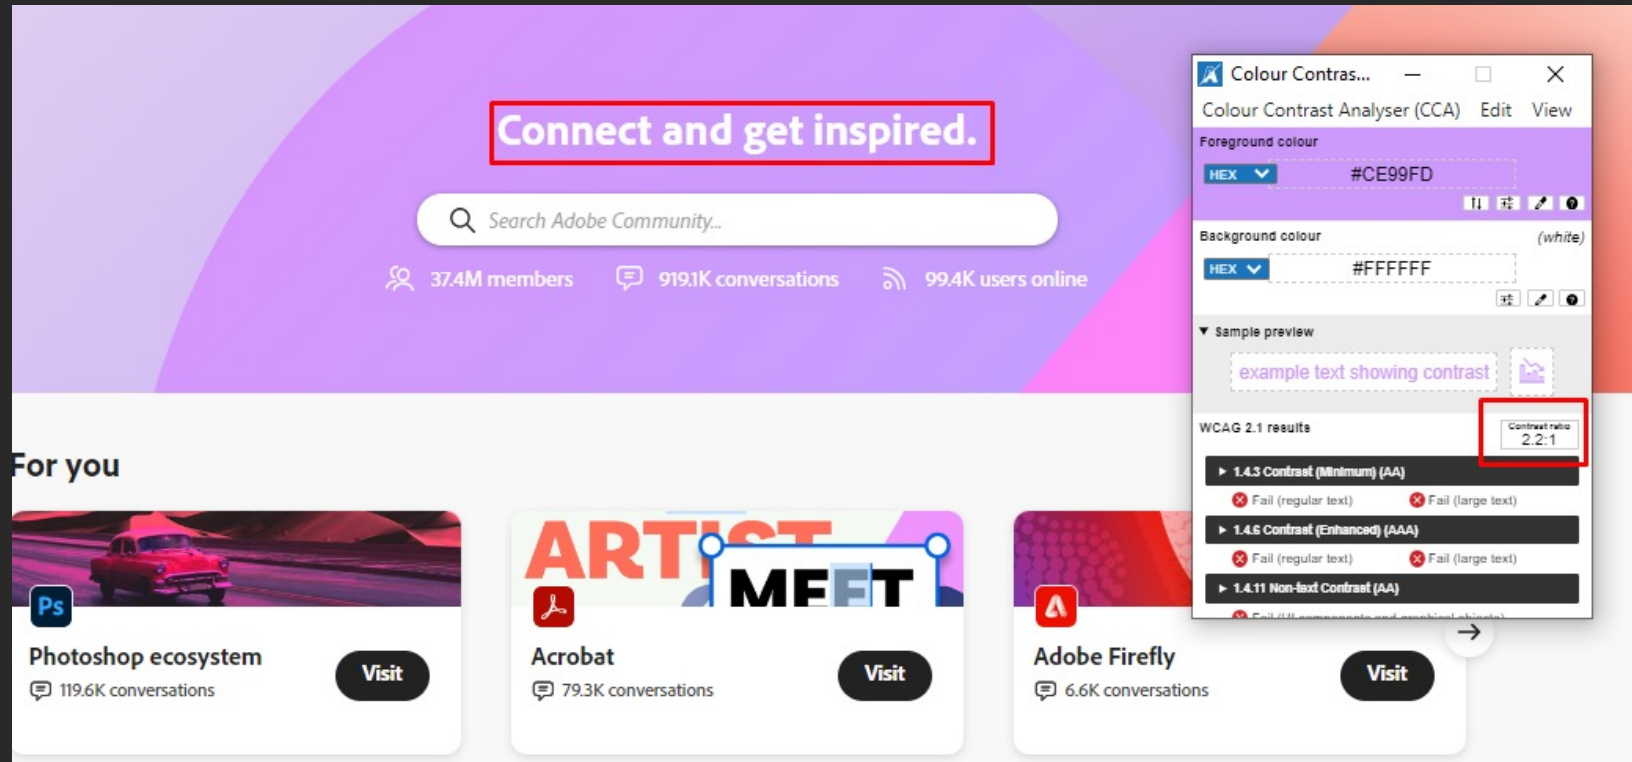

- We can test this in Figma using the built-in contrast checking, or a variety of contrast testing tools like Stark.

Large text

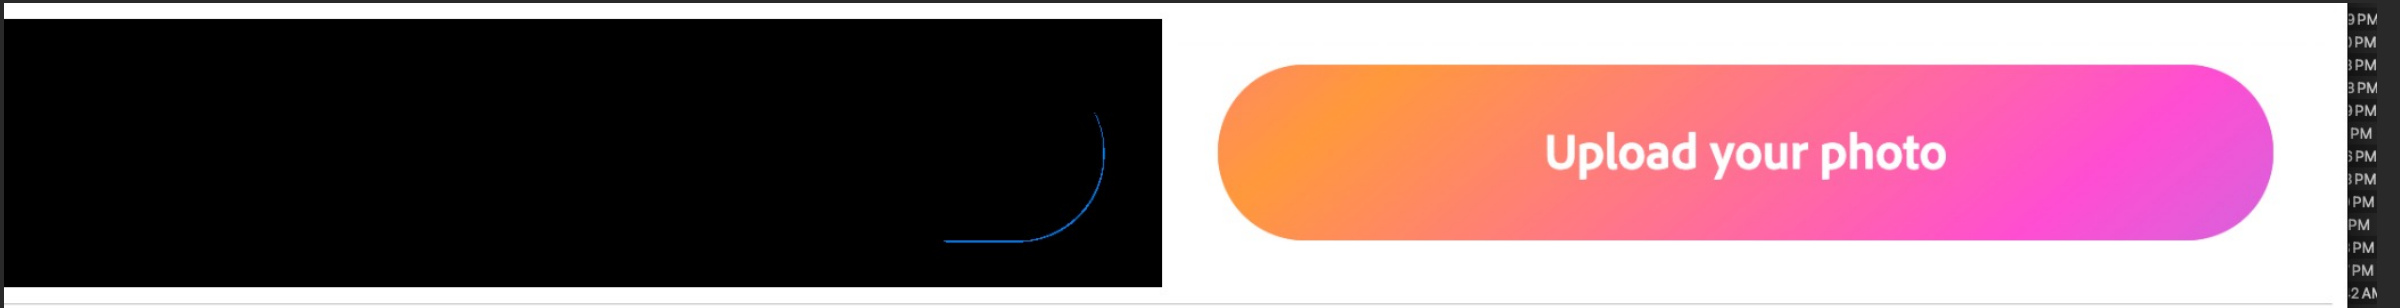

- It's hard to find an example of large text contrast failure that is not also an issue of white text over an image or gradient.

<https://community.adobe.com/>

Text over images or gradients

- Screen shot the text over image or gradient and upload to:
- <https://git.corp.adobe.com/pages/echevarr/ImgContrastRatio/ImgContrastRatio.htm>

Color contrast exercises

This section requires your participation

Contrast exercise 1 – Question

Yes = 👍 No = 😏 I don't know = 😲

Would the white text need to get tested?

<https://business.adobe.com/>

Contrast exercise 1 – Results

Yes = 👍 No = 😄 I don't know = 😲

Does it pass contrast requirements?

Contrast exercise 1 – Analysis

Yes. This text is at, or over, the required minimums for both small and large text.

Contrast exercise 2 – Question

Yes = 👍 No = 😄 I don't know = 😲

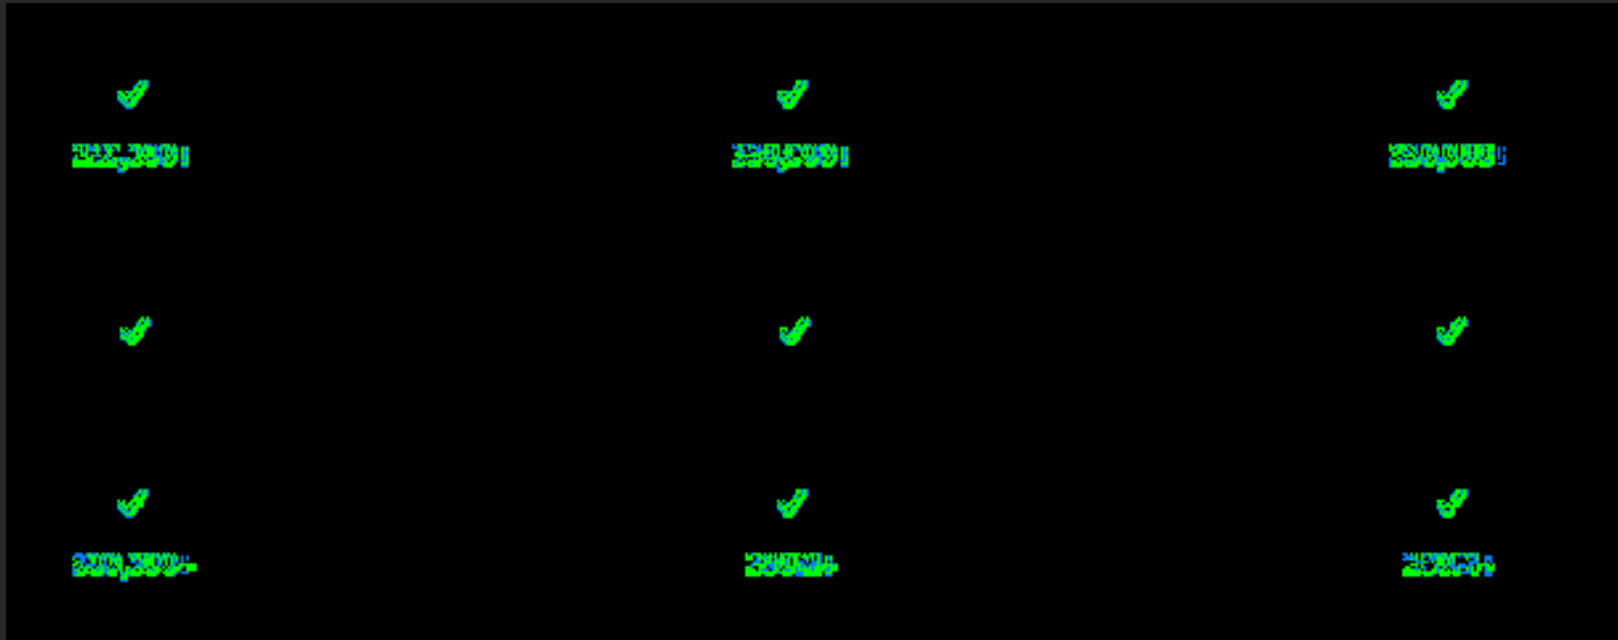

Templates and Design Assets			
Professionally designed templates Static, motion, and video templates.	✓ 220,000+	✓ 350,000+	✓ 350,000+
Template recommendations Preview your photo in fully editable templates that complement the context of your photo.	✓	✓	✓
Adobe Stock photos	✓ 500,000+	✓ 280M+	✓ 280M+

Do I need to test the checkmarks for contrast?

<https://www.adobe.com/express/pricing>

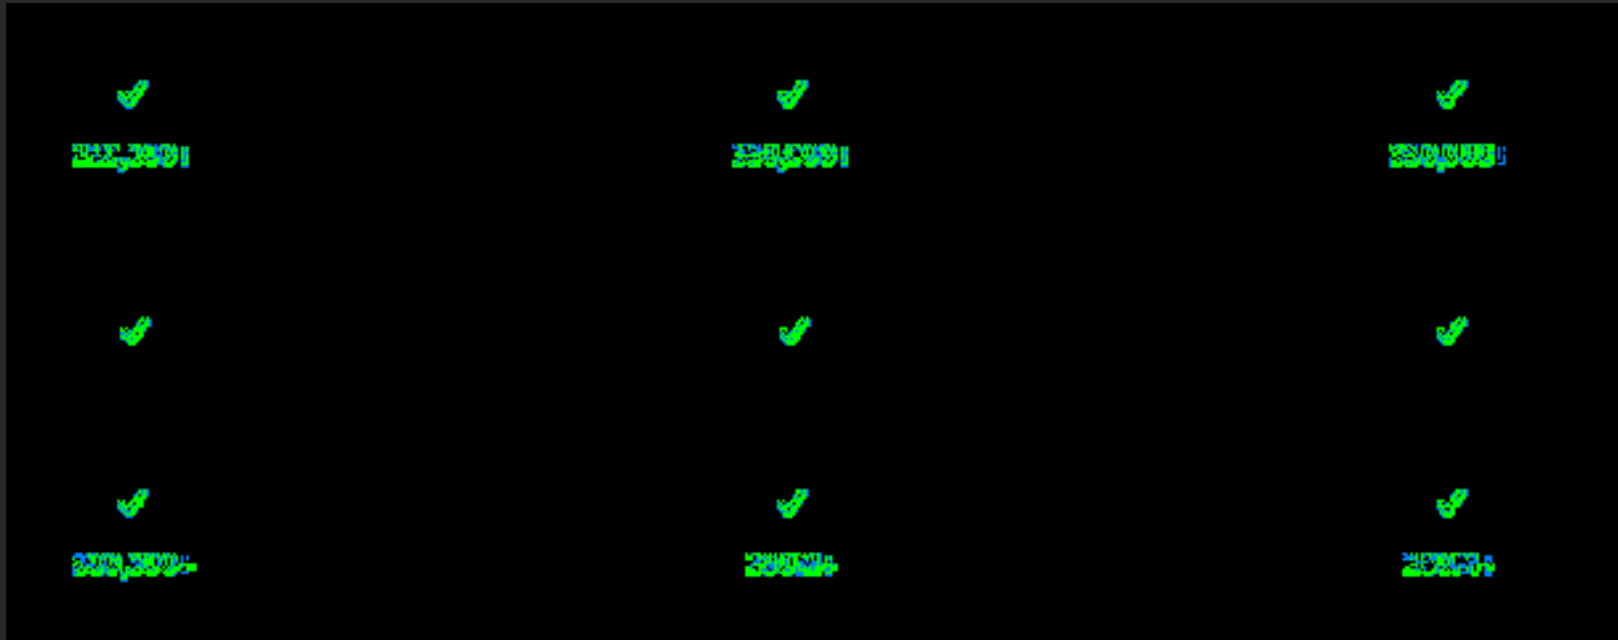

Contrast exercise 2 – Results

Yes = 👍 No = 😄 I don't know = 😲

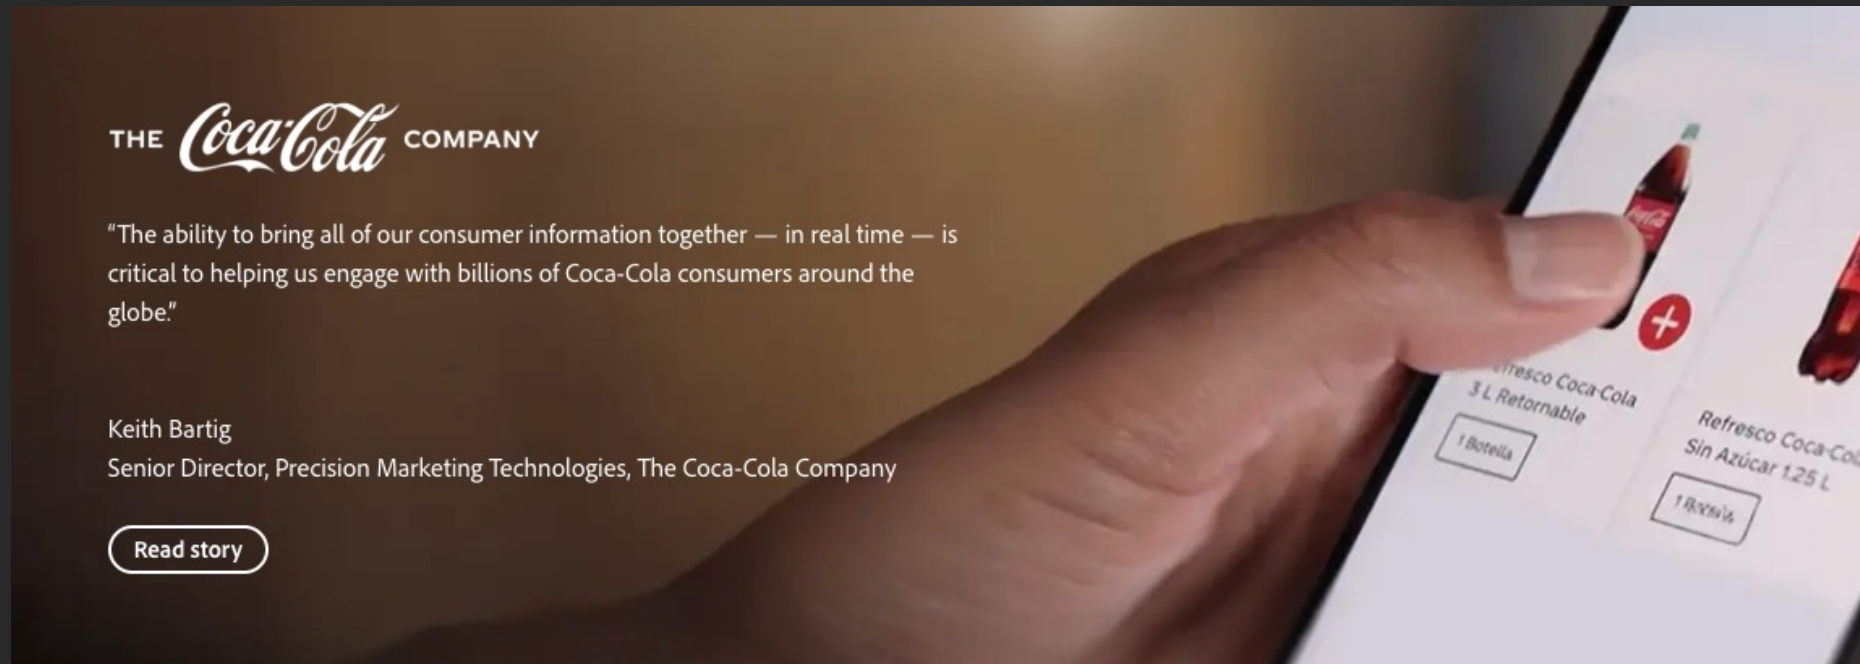

Does it pass contrast requirements?

Contrast exercise 2 – Analysis

Yes. The checkmarks must be at least 3:1 (like large text). The light green circles do not need to be checked as the checkmark itself is the important bit in context.

Contrast exercise 3 – Question

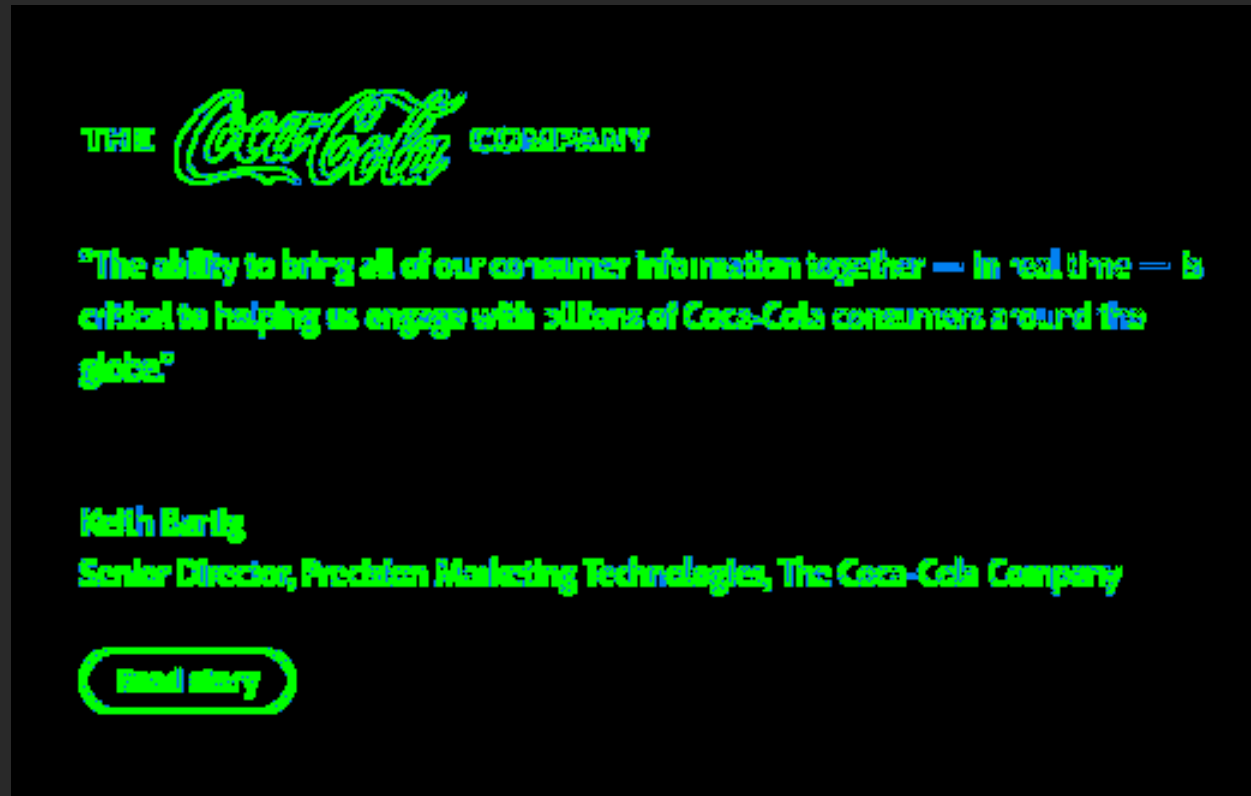

The logo must be 3:1 and the text 4.5:1. Let's use the internal contrast tool.

<https://business.adobe.com/>

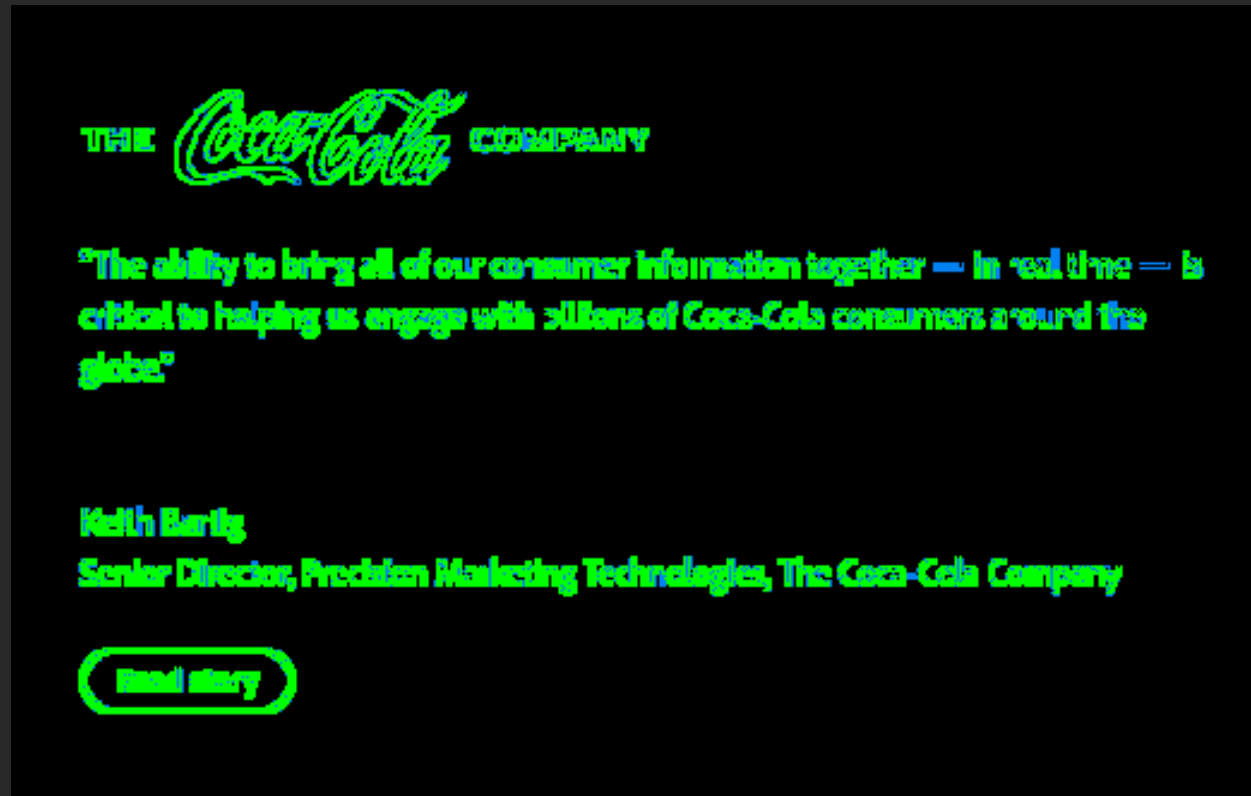

Contrast exercise 3 – Results

Yes = 👍 No = 😄 I don't know = 😲

Is the logo 3:1 or higher and the text 4.5:1 or higher?

Contrast exercise 3 – Analysis

Yes. We run this test desktop and mobile viewports.

Contrast exercise 4 – Question

Introducing the new AEP Workshop

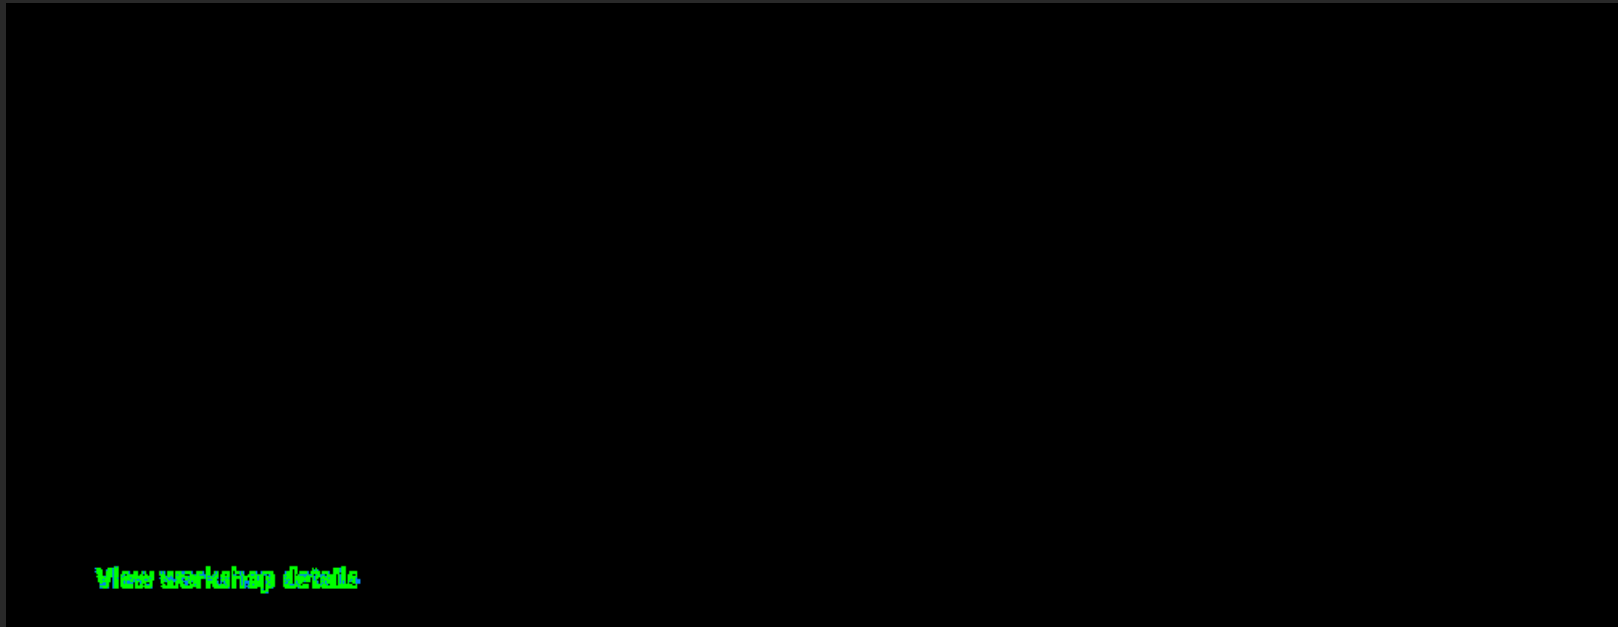

Adobe Digital Learning Services is excited to offer Architecting Profiles and Data Models, an exclusive 3-day AEP Workshop for solution architects, data architects, data engineers, system administrators, technical leads, and senior developers who are responsible for designing and implementing Adobe Experience Platform solutions. Learn how to architect profiles, build data models, and activate profiles to destinations through interactive case studies that reflect real business challenges. This workshop is offered as a private event only.

[View workshop details](#)

I'll tell you right now, this stands 0% chance of passing a contrast check. But let's do it anyway.

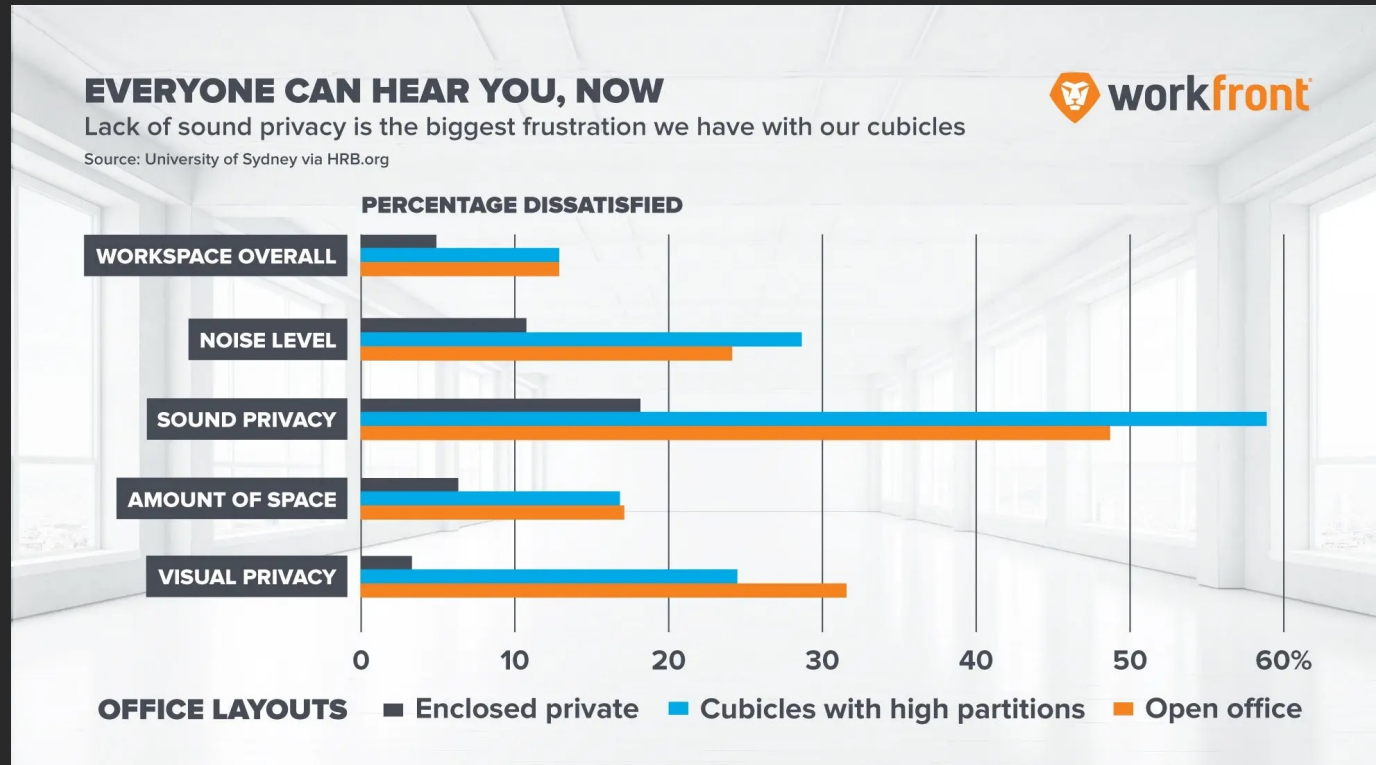

<https://learning.adobe.com/#carousel-8340b30c88-item-50a2a19c2b-tabpanel>

Contrast exercise 4 – Analysis

No. This text fails for small and large text alike. When the text is not blue or green in the tool, it's below 3:1 which is a complete failure all together.

Contrast exercise 5 – Question

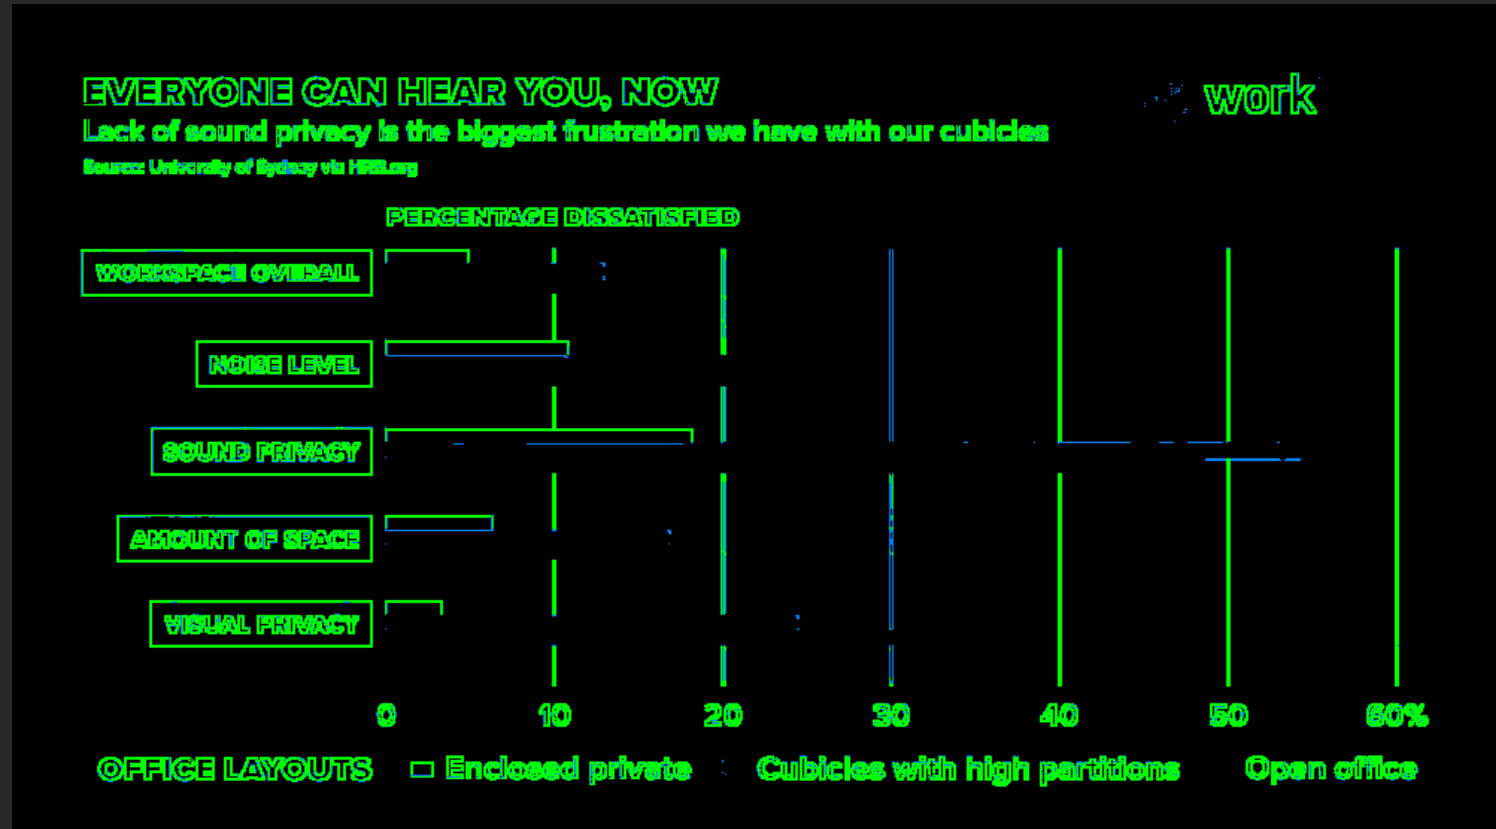

The bars in the chart must be 3:1 to the background (but not one another).

<https://business.adobe.com/blog/perspectives/what-science-says-about-open-offices>

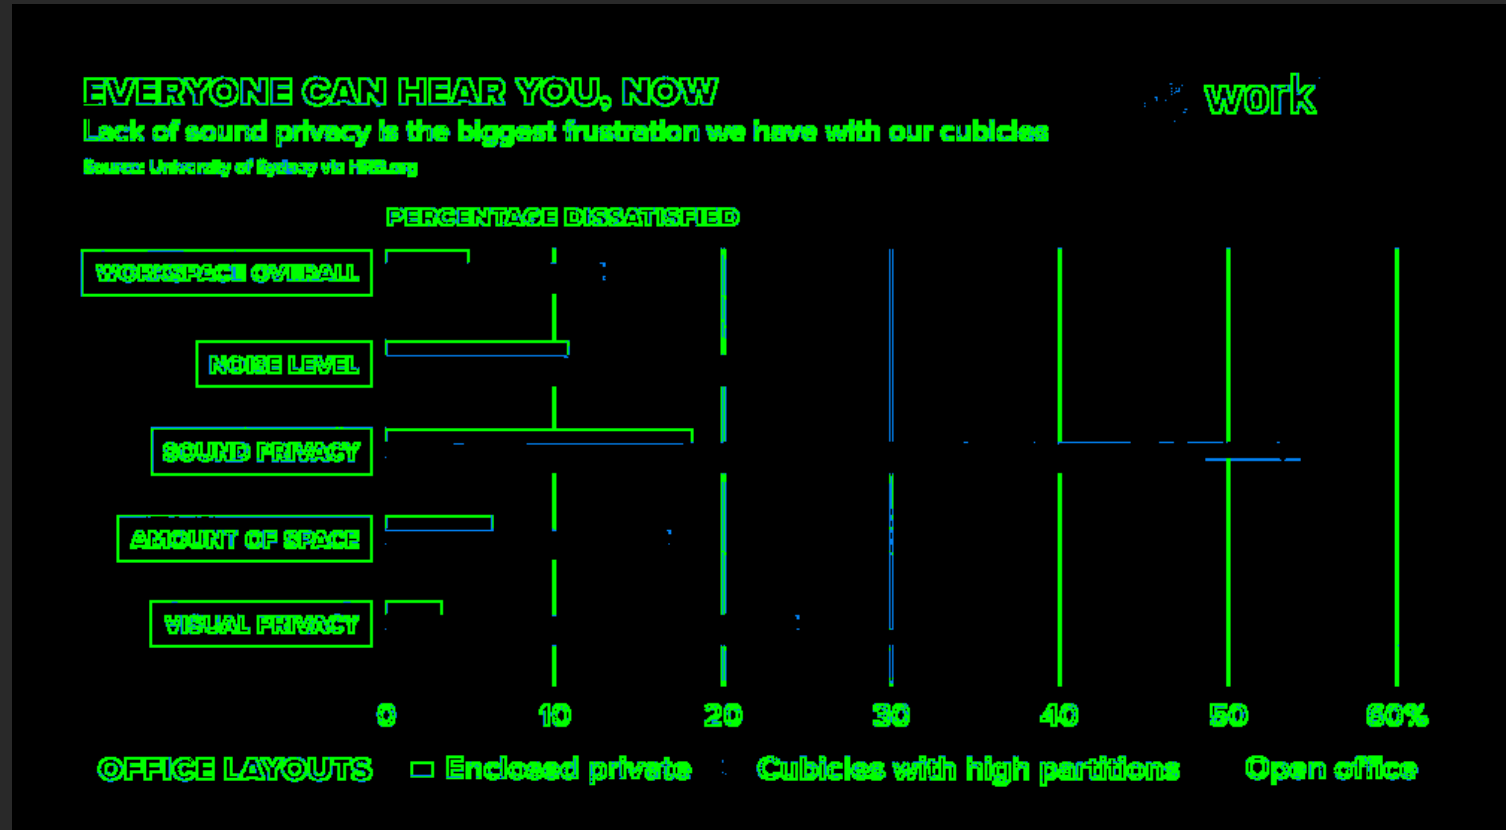

Contrast exercise 5 – Results

Yes = 👍 No = 😏 I don't know = 😲

The expectation that the bars of the chart must meet 3:1, does this data viz pass contrast requirements?

Contrast exercise 4 – Contrast analysis

No. The bars are below 3:1 ratio. The Content Author / Producer is not responsible for fixing this, but an accessibility ticket must be created to have the supplier resolve the issue.

Figma contrast testing

How do we test for contrast in Figma

- Figma has built-in contrast checking now.
- You may also copy HEX values to:
<https://color.adobe.com/create/color-contrast-analyzer>
- Use the internal tool for text/graphics overall tonal value gradients and/or images:
<https://git.corp.adobe.com/pages/echevarr/ImgContrastRatio/ImgContrastRatio.htm>
